

To be accepted as done by the product owner, an item/feature has to be developed and tested where it meets all acceptance criteria. To be accepted as done an item/feature is on a level where it could be deployed to the customer.

- Acceptance criteria met
- Code follows agreed standards and is error-free (and warning-free when possible)
- (Unit tested)
- Integration tested -> Does not impact the existing code negatively
- Another developer has accepted it
- Acceptance / system tested
- Releasable -> Has to be in a common repository's master branch at least (e.g.)1h before review
- All documentation has been updated
